PREFACE

South Australian Economic Indicators is a monthly publication which contains the latest available data at the time of preparation for a range of statistical series that have been identified as indicators of economic activity in this State. In a number of cases the figures presented are preliminary and subject to revision in subsequent issues.

Written and graphic commentary have been included for many of the selected series and analysis has been augmented with the calculation of the percentage change from the previous reference period together with the presentation of comparative Australian data. Time series information has been included to provide a historical perspective on many of the selected indicators. Future issues may be expanded to include further historical data in response to expressed user needs. This product is under continuous review and any suggestions for enhancement will be welcomed.

More detailed information on each series (including explanatory and technical notes) can be obtained from other Australian Bureau of Statistics publications or alternative data sources. To assist those seeking further information a source publication for each of the series has been documented in the statistical summary.

This issue includes a special article entitled *The Role of a Business Register in a Statistical System*. Future issues will contain further articles on statistical topics which concentrate on longer term trends or other issues pertinent to the South Australian economy.

If you have any inquiries concerning this publication please contact the editor, Brian Moody, telephone (08) 237 7315. All requests for statistical information should be directed to the ABS Information Service, GPO Box 2272 Adelaide SA 5001, telephone (08) 237 7100.

REVIEW

Overview

- In February 1995 the trend estimate for employed persons in South Australia was 2.0% higher than the February 1994 level, while the trend unemployment rate estimate continued the downward movement evident throughout 1994.
- Average weekly ordinary time earnings of full-time adult employees in South Australia decreased by 0.6% between August and November 1994.
- The value of overseas exports of South Australian produced commodities for the seven months to January 1995 was 0.2% higher than for the same period in 1993-94.
- The trend estimate for South Australian retail sales increased by 0.5% during January 1995 compared with an Australian rise of 0.3%.
- The provisional trend estimate for new motor vehicle registrations in January 1995 increased by 2.4 % from December 1994. This continued the upward trend which has been evident for several months.
- The trend estimate for total dwelling units approved in South Australia during January 1995 was 1.5% below the December 1994 figure and continued the decline in the series since its peak in July 1994.
- Total housing finance commitments for owner occupied dwellings decreased by 6.3% during the month of January. This continued the downward trend evident since the peak in March 1994.
- The estimated resident population of South Australia increased by 1,171 persons (0.1%) during the September quarter 1994 to 1,470,955.
- The number of short-term visitor arrivals to South Australia in December 1994 was 14.8% lower than in December 1993.

State Accounts

Gross State Product (GSP)

GSP (trend estimates in 1989-90 prices) grew by 0.9% in the September quarter 1994, well below the national average of 1.4%, and the third lowest of all the States. Only Tasmania (0.2%) and the ACT (-0.1%) had lower growth rates for the same period.

The rate of growth in GSP however has continued to increase progressively with rises of 0.1% (December quarter), 0.3% (March quarter) and 0.6% (June quarter).

The September quarter 1994 GSP was 2.0% higher than the September quarter 1993 but this was significantly below the national average growth of 5.7%.

State Final Demand

State Final Demand (trend estimates in 1989-90 prices) increased by 1.8% during the September quarter 1994, marginally higher than the national average of 1.6%. Private gross fixed capital expenditure rose strongly for the second consecutive quarter with an increase of 7.0% (5.4% in the June quarter). Private gross fixed capital expenditure was 14.3% higher than in September 1993.

Private final consumption expenditure increased by 0.9% in the September quarter 1994. It has grown by between 0.9% and 1.1% in each quarter since September 1993 and by 3.8% over the 12 month period.

International Accounts

Exports

Overseas exports of South Australian produced commodities were valued at \$2,193.4 million for the seven months to January 1995. This was 0.2% higher than for the same period in 1993-94. During the latter period metal and metal manufactures constituted 13.7%; road vehicles, parts and accessories, 8.9%; and wool and sheepskins, 8.2% of the total value.

Exports to Japan accounted for 17.2% of the total over the period from July 1994 to January 1995, while the ASEAN countries took 14.3% and New Zealand, 10.5%.

Imports

The value of overseas imports into South Australia (compiled from import documents lodged in South Australia) amounted to \$1,756.6 million for the seven months to January 1995. This was 3.4% above the level for the same period in 1993-94. In the period July 1994 to January 1995 road vehicles, parts and accessories accounted for 25.9% of South Australian imports with machinery, and petroleum and other petroleum products constituting 22.6% and 10.5% respectively.

Consumption and Investment

Retail Turnover

The retail trade trend estimate indicates that South Australian retail sales increased by 0.5% during January 1995 compared with an Australian rise of 0.3%. From July to October 1994 the trend estimate increased by 1.0 per cent or more each month but has gradually eased over the past three months. Industry groups showing the strongest growth in the trend estimates were clothing and soft goods retailing; recreational good retailing; and hospitality and services. The retail turnover estimate in original terms for January 1995 was \$682.8 million, a decrease of 27.5 per cent from December 1994 but 8.6% higher than January 1994.

**RETAIL TURNOVER
PERCENTAGE CHANGE FROM PREVIOUS MONTH
TREND ESTIMATES**

New Motor Vehicle Registrations

The provisional trend estimate for new motor vehicle registrations in South Australia for January 1995 increased by 2.4 % from December 1994. The past fifteen months has seen a steady increase in the trend series, flattening between June 1994 and August 1994 but strengthening in the last three months. The seasonally adjusted estimate for January 1995 rose by 9.1% from December 1994 and 23.5% from January 1994. In original terms there were 2,876 new motor vehicles registered in January 1995, down 17.6% on December 1994, but 28.5% more than January 1994. For new passenger vehicles only, the leading makes registered in January 1995 were Toyota (486 vehicles), Mitsubishi (444), Ford (443), Holden (303) and Mazda (123).

NEW MOTOR VEHICLE REGISTRATIONS

Tourist Accommodation

When the December quarter 1994 is compared with the December quarter 1993, rooms available in hotels, motels and guesthouses in South Australia decreased slightly from 10,650 to 10,608 whereas bed spaces increased from 29,864 to 29,888. Overall the room occupancy rate rose from 50.3% to 53.0%, ranging from 26.5% for one star rated establishments to 73.5% for four star rated establishments. Regional room occupancy rates ranged from 62.3% for Adelaide Statistical Division to 36.0% for Eyre Statistical Division. Takings from accommodation increased by 8.3% from \$38.1 million to \$41.3 million with average takings per room night occupied rising from \$77 to \$80.

Private New Capital Expenditure

Private new capital expenditure in South Australia for the September quarter 1994 was \$475 million, an increase of 17.1% from the previous quarter and 32.5% above the September quarter 1993 figure. New buildings and structures accounted for \$152 million while equipment, plant and machinery amounted to \$323 million. The manufacturing industry accounted for \$130 million or 27.4% of expenditure in the September quarter 1994. In seasonally adjusted terms private new capital expenditure for the September quarter 1994 was \$515 million, a rise of 34% from the previous quarter.

Production

Dwelling Approvals

The trend estimate for total dwelling units approved in South Australia during January 1995 continued the decline in the series since its peak in July 1994. The total of 899 approvals was 1.5% below the (revised) December 1994 figure of 913. The decline was influenced largely by a significant decrease in private sector house approvals. The national trend series has shown a similar downward movement over the same period.

Dwelling Commencements

The estimate of 3,076 derived from the Building Activity Survey for the number of dwelling units commenced during the September quarter 1994 was 6.8% higher than the 2,880 in the previous quarter. Commencements increased for both houses and dwellings in other residential buildings, with 62.8% of the total rise attributable to houses. For Australia total dwelling commencements (49,140) in the September quarter were 5.1% above the June quarter estimate.

Value of Non-residential Building Approvals

The value of non-residential building approved in January 1995 was \$23.4 million, a 35.4% decrease from the previous month high of \$36.2 million. Non-residential approvals for Australia for January 1995 were valued at \$632 million, an improvement of 12.8% on the previous month. The South Australian proportion of total Australia's non-residential approvals was 3.7% in January 1995.

Value of Total Building Activity

The total value of *building work commenced* during the September quarter 1994 was \$369.8 million, 9.7% more than the \$337.1 million recorded for the previous quarter. There were increases in the value of private and public sector commencements, with the private sector accounting for 87.2% of the \$32.7 million total increase in the value of commencements.

The total value of *building work done* during the September quarter 1994 was \$378.5 million, a 6.0% increase from the \$357.2 million recorded for the June quarter. Only 10.3% of the \$21.3 million increase was contributed by non-residential building. New residential building and residential alterations and additions combined to make up the remaining 89.7%. Nationally the total value of building work done was \$7,165.5 million which was 4.2% greater than the June quarter figure.

At \$333.9 million the value of *building work yet to be done* at the end of the September quarter 1994 was little different from the previous figure of \$334.1 million. Underlying this was a \$5.5 million fall in the value for the public sector which was similar to the rise in the private sector value. For Australia the value of building work yet to be done fell 1.5% to \$9,020.9 at the end of the September quarter 1994.

Value of Engineering Construction

The September quarter estimate of engineering construction work done in South Australia was \$156.1 million, a fall of 21.8% from the (revised) figure for the June quarter 1994. The value of work done was lower in all but the heavy industry category of construction. The Australian value of engineering work done also dropped in the September quarter, from \$3,555 million to \$2,950 million with only Queensland, Northern Territory and Australia Capital Territory recording increases over the previous quarter.

Prices

Consumer Price Index

In the December quarter 1994 the all groups Consumer Price Index (CPI) increased by 0.8% nationally and this contributed to an annual increase of 2.5%. For Adelaide the quarterly increase was 1.0% and the annual movement to the end of December 1994 was 2.8% - the second highest increase in Australia.

House Building Materials

In January 1995 rises in the price of house building materials were recorded in Perth, Hobart, Canberra (all 0.5%) and Adelaide (0.2%). Brisbane recorded a fall of 0.4%, with no change in other capital cities. Over the past twelve months, rises have ranged from 1.2% in Adelaide to 3.9% in Perth.

Non-house Building Materials

In January 1995, of the capitals, Adelaide and Perth recorded the highest monthly rise (0.5%) for non-house building materials. Sydney recorded an increase of 0.4% while the remaining State capitals recorded 0.2%. In the past twelve months there have been increases in all capital cities with Sydney recording the greatest at 3.8% followed by Adelaide (3.3%) and Perth (2.8%). Hobart was the lowest at 1.5%. The weighted average for the six State capitals was 3.1%.

House Prices

Nationally, between the September and December quarters 1994, established house prices decreased by 0.4% while project home prices increased by 0.8%. Over the same period prices of established houses in Adelaide fell by 2.2% while the prices of project homes rose by 0.6%.

On an annual basis the December quarter 1994 prices for established houses rose by 3.4% nationally while the increase for project homes was 2.8%. At 3.0% Adelaide's annual increase for established houses was below the national figure but the rise in prices of project houses in Adelaide (3.7%) was well above the national increase.

Labour Force and Demography

Population

The estimated resident population of South Australia increased by 1,171 persons (0.1%) during the September quarter 1994 to 1,470,955. The largest component was natural increase which accounted for 1,755 persons, while the net interstate migration outflow of 1,380 persons was greater than the net gain from overseas migration of 796 persons.

Employment

The underlying trend estimate of employed persons in South Australia has been increasing over the past two months. This follows a general upward movement between February and September 1994 and a subsequent decline to December 1994. The February 1995 estimate (647,400) was 2.0% higher than the level of 12 months ago.

The underlying trend estimate of employed persons in Australia has been increasing since February 1993 and had reached 8,121,500 at February 1995. Over the 12 months to February 1995, full-time and part-time employment have increased by 2.9% and 7.3% respectively.

EMPLOYMENT SOUTH AUSTRALIA

Unemployment

The provisional trend unemployment rate for South Australia continued the downward movement evident throughout 1994, reaching 9.8% in February 1995. Between January and February 1995, the trend unemployment rate for males decreased by 0.1 of a percentage point to 10.7%, while the rate for females fell by 0.2 percentage points to 8.6%.

UNEMPLOYMENT RATES TREND ESTIMATES

Overtime

The proportion of employees who worked overtime in South Australia in November 1994 was 17.5% compared with 17.8% in November 1993.

Industrial Disputes

There were 2,200 working days lost through industrial disputes in South Australia during December 1994. At 4.5% of the Australian total (49,000 working days), South Australia had a relatively low level of disputation.

In the twelve months to December 1994, 18,000 working days were lost through industrial disputation in South Australia.

**INDUSTRIAL DISPUTES
WORKING DAYS LOST
SOUTH AUSTRALIA**

**Short-term Overseas
Visitors Arrivals**

Short-term visitor arrivals to South Australia in December 1994 fell by 7.1% from November 1994 to 7,835. This was 14.8% lower than the December 1993 total. The 1994 annual figure (69,713) was 4.2% higher than in 1993.

The December 1994 figure for Australia showed an increase of 23.6% from November to 383,989 and was 11.6% higher than December 1993. The number of short-term visitors to Australia in 1994 was 12.1% higher than 1993 and 29.0% higher than 1992. The major source countries for these visitors over the past three years were Japan, New Zealand and the United Kingdom.

Short-term Resident Departures

South Australian short-term resident departures for December 1994 totalled 11,534. This number was 41.1% higher than in November 1994 and 12.3% above December 1993. South Australian departures increased by 1.0% from 1993 to 114,816 in 1994.

Short-term departures from Australia increased from November to December 1994 by 51.5% to 264,470, and were 5.2% higher than in December 1993. The number of short-term departures of Australians in 1994 was 3.8% higher than in 1993 with the main destinations being New Zealand, United States of America, United Kingdom and Indonesia.

Incomes

Average Weekly Earnings

Average weekly ordinary time earnings of full-time adult employees in South Australia decreased from \$602.60 in August 1994 to \$598.70 in November 1994. Male full-time ordinary time earnings fell from \$628.20 in August 1994 to \$619.30 in November 1994. Over the same period, the comparable level for females rose from \$553.70 to \$558.10.

Average weekly total earnings of all employees in South Australia were \$505.20 in November 1994, down from \$507.40 in August 1994.

Since it is an average of earnings across all employees, changes in average weekly earnings may occur through changes in employment as well as changes in pay levels.

Award Rates of Pay

Over the 12 months to January 1995, the weekly award rates of pay index for full-time employees in South Australia increased by 0.9%.

For full-time adult male employees, the largest annual movement of the index occurred in the construction industry (an increase of 2.8% since January 1994).

For full-time adult female employees, the largest annual movement of the index occurred in public administration and defence (an increase of 1.4% since January 1994). Employees in the defence forces are excluded from these estimates.

Financial Markets

Housing Finance

Total housing finance commitments for owner occupied dwellings decreased by \$15.3 million (6.3%) to \$226.2 million during the month of January 1995. This continued the downward trend evident since the peak of \$404.5 million in March 1994.

The main component, financing commitments for the purchase of established dwellings was down by \$5.1 million (3.3%) to \$149.4 million which is well below the equivalent month last year. Financing commitments for construction of dwellings fell by \$2.5 million (8.3%) to \$27.2 million. Purchase of newly erected dwellings decreased marginally by \$0.2 million (1.7%) to \$11.6 million.

SECURED HOUSING FINANCE COMMITMENTS TO INDIVIDUALS
SOUTH AUSTRALIA

Personal Finance

Personal finance commitments fell significantly for the second consecutive month falling by \$22.3 million (12.6%) in December 1994 to \$155.1 million in January 1995.

Although sales of used motor vehicles and station wagons under fixed loan commitments increased by \$2.0 million (5.6%) to \$38.3 million this was more than offset by the large fall in sales of new motor vehicles and station wagons which decreased by \$3.7 million (21.6%) to \$13.4 million. Total personal finance commitments under fixed loan commitments decreased by \$7.0 million (5.7%) to \$116.1 million in January 1995 but was still the highest January figure ever recorded.

Total personal finance commitments under revolving credit commitments decreased significantly by \$15.2 million (28.1%) to \$39.0 million.

Commercial Finance

Total commercial finance commitments fell significantly in January by \$251.8 million (43.8%) to \$323.5 million making January the lowest month since February 1993. A large decrease was recorded for commitments under fixed loan facilities and for commercial finance commitments under revolving credit facilities.

Commercial finance commitments under fixed loan facilities decreased by \$74.3 million (29.4%) to \$178.1 million but this was still the highest January figure since 1991. The greatest decrease occurred for the industry group, property and business services, which fell by \$24.7 million.

Commitments under revolving credit facilities decreased by \$177.5 million (55.0%) to \$145.4 million with the category, manufacturing down by \$182.1 million to \$14.9 million from the very high figure of \$197.1 million recorded in December.

COMMERCIAL FINANCE COMMITMENTS
SOUTH AUSTRALIA

Lease Finance

The value of goods under new finance lease commitments has continued to fall from the peak of \$36.1 million in June. In January 1995 new finance lease commitments totalled \$21.4 million a decrease of \$1.6 million (7.0%) from the December 1994 figure of \$23.0 million.

Lease commitments for new motor vehicles and station wagons fell by \$1.0 million for both those subject to depreciation and those not subject to depreciation but there was an increase in lease commitments for used motor vehicles and station wagons not subject to depreciation. Total motor vehicles under new lease commitments decreased by \$2.7 million (20.9%) to \$10.2 million.

The main fall in goods under new finance lease commitments was for manufacturing equipment down \$1.3 million (81.0%) in January to \$0.3 million from the high December figure of \$1.6 million. Office machines recorded the main increase rising by \$2.8 million from the low December figure of \$0.6 million.

FOCUS

The Role of a Business Register in a Statistical System

Introduction

The collection of accurate and timely economic statistics requires a comprehensive list of the businesses to be covered by statistical collections.

For its economic statistical collections, the Australian Bureau of Statistics (ABS) uses a master list called the 'ABS Business Register'. The term 'business' is used in the broadest sense to include most forms of entity engaged in economic activity and encompasses companies, sole proprietor businesses, self-employed professionals, government agencies, community service organisations and religious organisations.

Using a common register of hierarchical units for most ABS economic collections improves the comparability of data obtained from different ABS collections and enables them to be aggregated to cover the whole of the economy.

The ABS Business Register records the organisational structure of businesses, names and addresses. It records whether businesses are privately owned or government authorities, industry and size of operations. Size information (number employed) is necessary to ensure that samples selected are representative of the range of businesses.

This article explains the central role played by the register in ABS economic statistical collections. The main problems in keeping the register up-to-date are discussed, as are ways in which changes to the register can influence published statistics.

Definition of a Business

The definition of a business unit is not straightforward. Most businesses in Australia are simple single location, single legal entity businesses which are easy to define and record on the register. However, a large number of businesses are more complex, and the level at which a unit is defined may depend on the information collected. Not all information is maintained by a business at every level: for example, sub-annual employment information tends to be kept for the outlet or location level while sub-annual financial information may be available only for high level operational units.

The ABS Business Register, first developed in the 1960s, was based on a hierarchy of units largely built around legal structures. Over time there has been an increasing divergence between legal and operating entities, especially within large business groups. Often a large business will divisionalise its operation along lines which do not coincide with the boundaries of its formal legal entities. While annual accounts have to be prepared on a legal entity basis for taxation and other regulatory requirements, detailed operational and sub-annual accounts are often not available at the legal entity level.

Consequently, some businesses had difficulty meeting ABS requirements for data. This resulted in an increasing provider load and an inevitable decline in the quality of ABS statistical output. In response the ABS has adapted

its business units model to support units which better align with the record keeping practices of businesses.

While legal entities are recorded on the register, the major units maintained for statistical reporting purposes are enterprise group, management unit, establishment and location. The definition of *enterprise group* is the group of legal entities falling under common ownership and control. A *management unit* is generally the highest unit within an enterprise group for which sub-annual accounts of income, operating expenses and assets are maintained. An *establishment* is generally defined as the smallest unit within a management unit for which annual accounts of income, operating expenses and assets are maintained, while the *location* is the unit used to record separate physical sites. Normally industry and employment details are the only items of statistical information requested at the location level.

A concern for the ABS in defining business units is to achieve industry homogeneity within units, *e.g.* to separate out manufacturing and wholesaling activity within one management unit. When this is not possible each unit is coded to its industry of predominant activity in the knowledge that homogeneity is affected.

Classification of Industry

Business units on the ABS Business Register are industry coded using the Australian and New Zealand Standard Industrial Classification (ANZSIC).

COUNTS OF LOCATIONS BY ANZSIC DIVISION
SOUTH AUSTRALIA AND AUSTRALIA
MARCH 1994

Industry Division	South Australia	Australia	SA as a % of Aust
Agriculture, forestry & fishing	18,472	188,495	9.8
Mining	251	4,523	5.5
Manufacturing	3,636	50,912	7.1

Personal & other services	2,963	36,601	8.1
Total	68,286	866,636	7.9

Classification of Area

Business units on the Register are area coded using the Australian Standard Geographical Classification (ASGC). Postcode details are also available.

COUNTS OF LOCATIONS BY ASGC STATISTICAL DIVISION SOUTH AUSTRALIA MARCH 1994

Statistical Division	Agriculture	Other	Total
Adelaide	1,441	36,718	38,159
Outer Adelaide	3,936	3,002	6,938
Yorke & Lower North	2,482	1,539	4,021
Murray Lands	4,162	2,180	6,342
South East	3,072	2,322	5,394
Eyre	1,886	1,378	3,264
Northern	1,493	2,675	4,168
Total	18,472	49,814	68,286

Coverage and Updating Procedures

An important feature of any list used to represent the business population is its completeness or coverage. In sample surveys, where only a small percentage of businesses are asked to supply data, it is important to be aware of all the units in the population, so that the sampled data can be expanded to represent all units.

The Australian Tax Office (ATO) is the primary updating source for the register. The ABS obtains details of all businesses registered as group employers with the ATO. New registrations are sent a form by the ABS to obtain more information including name and address, business type, industry, structure and employment data.

Keeping the ABS Business Register up-to-date by removing defunct businesses is a difficult task except in industry sectors where a regular census is conducted (e.g. agriculture, manufacturing or mining). At any given time up to 20% of the units on the ABS Business Register can be defunct.

From time to time the ABS conducts special 'units surveys' of segments of the ABS Business Register to update details for businesses that are still operating and to delete those that have become defunct.

Conducting units surveys of this magnitude are costly and the ABS is increasing its use of the group employer information to identify duplications, defunct businesses and businesses not on the register (e.g. businesses which may have been incorrectly deleted).

Because the largest 700 enterprise groups account for almost 35% of employment in Australia, special procedures are followed for large businesses. These include personal visits and ongoing contacts for the larger and more complex, and mail profiling for the remainder.

Focus on Employing Units

Ideally the register should contain all businesses. However, there is no comprehensive source to identify small businesses without paid employees. Rather than have an uncertain and fluctuating coverage of non-employing businesses, the scope of the register has been defined to include only businesses with employees. For most industries, non-employing businesses contribute a relatively small proportion of the total economic activity,

and an even smaller proportion of the change in economic activity from period to period.

An exception has been made for agricultural businesses, which are included on the register, regardless of whether they employ staff, provided they have an annual estimated value of agricultural operations of \$5,000 or greater. The reason is that a significant proportion of total agricultural production comes from farms which have no paid employees. For this industry the annual agricultural census is the main mechanism for keeping the listing of non-employing businesses up to date.

The following table provides details of the number of locations on the register by employment size

COUNTS OF LOCATIONS BY EMPLOYMENT SIZE, SOUTH AUSTRALIA AND AUSTRALIA MARCH 1994

Employment size of location	South Australia		Australia	
	No.	%	No.	%
Not applicable (a)	13,140	19.2	91,626	10.6
Less than 5	36,514	53.5	535,766	61.9
5-9	9,756	14.3	128,942	14.9
10-19	4,543	6.7	57,150	6.6
20-49	2,808	4.1	32,772	3.8
50-99	906	1.3	11,123	1.3
100+	619	0.9	8,257	1.0
Total	68,286	100.0	865,636	100.0

(a) Mainly agricultural units.

Effects of Business Register Updating on Published Statistics

The ABS Business Register is used to provide lists of businesses for most economic statistics collections and its accuracy affects published statistics in the following ways.

Under-coverage

The most common problem is under-coverage. If some business units are missing from the register, they cannot be represented in the resultant statistics. This means that the resulting published statistics are likely to understate the true situation. Both censuses (such as the annual manufacturing census) and surveys (such as the monthly retail survey) are vulnerable to under-coverage.

Duplication on the Register

Duplication of a business on the register has the opposite effect to under-coverage. If a single business appears on the ABS Business Register more than once, the resultant statistics will be overstated.

Duplication is not a serious problem for censuses where a form is sent to every unit that appears on the population frame. Respondents will usually inform the ABS if they have received two forms. However, many of the regular (monthly or quarterly) economic indicators produced by the ABS are based on sample surveys which may be vulnerable to errors caused by duplication on the ABS Business Register. Because only a small percentage of the units are sent forms, the duplication is unlikely to be detected and overestimation may follow.

Defunct Businesses

Defunct businesses are detected and accounted for in the published statistics almost immediately and in theory do not present the same problem as under-coverage and duplication. In censuses defunct businesses in the scope of the collection are discovered during processing. This is true also of sample surveys, even though only a small percentage of businesses are sent forms. A business which is in a sample but has ceased operations remains in the sample but contributes a zero value to the estimates. These defunct businesses in the sample represent all the defunct businesses in the population (in exactly the same way that the operating businesses in the sample represent all the operating businesses in the population).

In practice it can be difficult to distinguish between businesses which are defunct and businesses which are operating, but not responding to the forms. The ABS puts considerable effort into following up non-respondents but if mistakes are made, and non-respondents are incorrectly treated as defunct businesses, the published figures will understate the true situation.

Lags in Adding New Businesses to the Register

From the time a new business registers as a group employer with the ATO it may take from six to twelve months before it appears on the register. There will be a further delay before it is included in the population frame for a statistical collection and begins its contribution to published statistics.

This contrasts with businesses ceasing operation which will affect published statistics almost immediately, even though it may be some time before they are removed from the register.

While the number of businesses in the economy is stable, there is little effect on published statistics. However, when the number is expanding, the delay in adding new businesses to the register may cause the published statistics to lag behind economic events. For example, an upturn in the economy is likely to be reflected in three ways:

- increased activity for live units;
- more new units; and
- less units becoming defunct.

Survey activity will immediately note the increased activity for live units and the smaller number of units

becoming defunct. However, there will be a lag in identifying the increased number of new units. This will lead to a slight understatement of the upturn, and there will be a time lag before the full extent of the change emerges.

On the other hand, in a downturn, there will be a decreased level of activity for live units, together with an increased number of units becoming defunct, with both aspects reflected immediately in the statistics produced. In addition, there may be a slowdown in the rate at which new businesses come into existence, and it may take six to twelve months for published statistics to reflect accurately the changed rate.

Some variation in the updating lag is unavoidable. In most cases, the resulting fluctuations in published statistics are minor and smaller than the natural variation in the figures.

Statistics available from the ABS Business Register

The register has long been a source of statistical data in its own right providing statistical aggregates about the type of legal organisation, structure, location, industry classification, and employment of businesses. This information can be used to generate business profile statistics classified by small areas such as local government areas or postcodes.

The statistics provided from the register should be seen as broad indicative data at a point in time, rather than precise measures. Therefore detailed comparisons with register data from other time periods, or with other ABS statistics, should be avoided.

The statistics used in this article have been compiled from the ABS Business Register. Details concerning the availability of statistical data from the register may be obtained from the ABS Information Service Adelaide, on (08) 237 7100.

This article has been adapted from an article written by Geoff Lee and Leon Pietsch and published in the September 1991 edition of the *Australian Economic Indicators* (1350.0). Additional information is available in the Information Paper, *Australian Bureau of Statistics Business Register Recent Developments*, 1991 (8130.0) and *Profiles of Australian Business* (1322.0).

IRDB

The Integrated Regional Database

A Regional Insight into Australia

The Integrated Regional Database is a new product from the Australian Bureau of Statistics that contains a wide variety of the most recent data from its social and economic data collections for small areas. This magnificent new electronic package allows you to turn data into tables, graphs and knowledge.

The Integrated Regional Database is available with two sets of data, one at Statistical Division (SD) level and above, the other at Statistical Local Area (SLA) level and above.

- ▲ Produce professional tables
- ▲ Easy data and area selection
- ▲ See the area you are selecting on a map
- ▲ Manipulate tables
- ▲ Export data
- ▲ Reporting ability

ABS PUBLICATIONS AND PRODUCTS

Statistics collected by the ABS are generally made available to clients in published form. Some, including those not published, are available in one or more of the following forms: microfiche, magnetic tape, computer printout, CD, floppy disk, photocopy and clerically extracted tabulation.

Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues on Tuesdays and Fridays a *Publications Advice* (1105.0) which lists publications to be released within the next few days. The *Catalogue* and *Publications Advice* are available from any ABS Office.

To receive ABS publications on a regular basis contact the *ABS Publication Mailing Service* on (008) 02 0608.

A large range of data is available via on-line services, diskette, magnetic tape, tape cartridge and CD ROM. For more details about our electronic data services, contact any ABS Office.

The *ABS Information Consultancy Service* has specialist staff to assist and advise clients with their statistical inquiries. For more detailed information about

these services call at the ABS, 55 Currie Street, Adelaide, telephone the Information Officer on (08) 237 7100, or write to Information Service, ABS, GPO Box 2272, Adelaide 5001.

The ABS also provides a *Statistical Consultancy Service*, for expert assistance in survey, sample and questionnaire design, data collection, processing and analysis, and statistical modelling. For more information contact Gary Niedorfer, telephone (08) 237 7379.

SYMBOLS AND OTHER USAGES

n.a.	not available
n.y.a.	not yet available
..	not applicable
0, 0.0	nil or rounded to zero

Where figures have been rounded, discrepancies may occur between sums of the component items and totals.
